**AIM: Backend: Using NodeJS, build a real time chat application or email sender.**

**CODE:**

```
// File: index.js

const express = require('express');

const http = require('http');

const socketIo = require('socket.io');

const path = require('path');

// Initialize Express app

const app = express();

const server = http.createServer(app);

const io = socketIo(server);

// Serve static files from the 'public' directory

app.use(express.static(path.join(__dirname, 'public')));

// Route for the home page

app.get('/', (req, res) => {

  res.sendFile(path.join(__dirname, 'public', 'index.html'));

});

// Socket.io connection handling

io.on('connection', (socket) => {

  console.log('A user connected');

  // Handle user joining with a username

  socket.on('join', (username) => {

    socket.username = username;

    io.emit('message', {
```
